- "Hot" if temperature is greater than 35
- "Normal" if temperature is between 20 and 35
- "Cold" otherwise

Q7:

Write a Python program for a Student Information System that performs the following tasks:

Requirements:

1. Take input from the user for a student with the following details:

- Name (string)
- Age (integer)
- Marks (float)
- Is the student enrolled? (boolean: True/False)

2. Use **logical operators ('and', 'or') to check conditions.

3. Apply the following conditions:

Condition 1 (Pass/Fail using AND):

If marks are ****greater than or equal to 50 AND age is greater than or equal to 18****, print:

Student is PASS and eligible for higher studies

Condition 2 (Special Case using OR):

If marks are ****greater than or equal to 80 OR enrolled is True****, print:

Student is Excellent / Active Participant

Condition 3 (Failure Case):

Otherwise print:

Student needs improvement

4. Finally, print all the student details in a ****proper formatted output**** like this:

----- Student Record -----

Name: Ali

Age: 20

Marks: 75

Enrolled: True

Result: PASS / FAIL / EXCELLENT (based on condition)
