

## 1. Library Book Management System

Create a class named LibraryBook.

### Requirements:

- Attributes:
    - title (public)
    - author (public)
    - \_availableCopies (protected)
  - Constructor should initialize all attributes.
  - Methods:
    - borrowBook() → decrease available copies by 1 if copies are available.
    - returnBook() → increase available copies by 1.
    - showBookDetails() → display all book information.
  - Create at least 2 book objects and perform borrowing and returning operations.
- 

## 2. Employee Management System

Create a class named Employee.

### Requirements:

- Attributes:
  - name (public)
  - designation (public)
  - \_salary (protected)
- Constructor should initialize all attributes.
- Methods:
  - showDetails() → display employee information.
  - increaseSalary(amount) → increase salary by the given amount.
  - showSalary() → display the current salary.
- Create 3 employee objects and give a salary increment to one of them.
